A Happy Day

Across the golden **amber** sand
I watched the **sunlit** sea,
The waves were **sparkling** in the sun
And laughing back at me.
Out they danced and in they raced
And **tumbled** in the caves,
I think that I shall never see
Such happy things as waves.
– Alice Taylor

CAPACITY is the amount that something can hold.

We measure capacity in millilitres (ml) or litres (l).

Example: This glass has a capacity of 300 ml (but is actually holding only 160 ml)

Here is a millilitre of milk in a teaspoon. It only fills the bottom of the teaspoon!

A teaspoon can hold about **five** millilitres:

1 teaspoon of liquid

is about 5 millilitres

A child's medicine is often measured using a 5ml spoon. You might have some of these white plastic spoons at home. One side measures 5ml and the other side measures 2.5ml.

Millilitres are often written as **ml** (for short), so "100 ml" means "100 millilitres". Here we have **150 ml** of milk in a <u>measuring cup</u>. It doesn't say "150" ... it says "50" ... but it is halfway between 100 and 200 so you can figure out it is 150 ml.

What about a litre?

1,000 millilitres = 1 litre

Litres are often written as L (for short), so "3 L" means "3 Litres"

All of the items below are sold in 1Litre containers.

4.

Activity: Have a look in your presses for some 1 Litre food or drink containers.

Watch to find out more about the Taj Mahal in India https://www.youtube.com/watch?v=I6i8cLXPGQE

Activity: Use your copy or a sheet of paper and list the different types of rocks inside and outside your house. Use the examples in the book to help you. Look at the roof, walls, footpaths or patios, outdoor buildings, fireplaces, etc.

Optional: Go for a look at the granite picnic table on the riverbank near the Old Mill or the viaduct, which is made of squared rubble limestone.

Capacity

Yesterday, you looked at liquids that come in 1-litre containers.

- 1. **Find** the following containers in your house: eggcup, teapot, bowl, saucepan, vase, ladle, glass (whichever ones you can find easily). **Use the table on p. 165** of your Busy at Maths.
- 2. First, estimate will the vase hold more than 1l, about 1l or less than 1l?
- 3. Then, fill a 1l measuring jug or a 1l container with water.
- 4. Carefully pour the water into the vase. If you still have water in your jug after you have filled the vase, the vase holds less than 1l. If you run out of water while filling the vase, the vase holds more than 1l. If you fill the vase and have no water left in your jug, the vase holds about 1l.
- 5. Do this for all of the containers mentioned above.

Use a jug at home or the jug on page 165 to complete part 2 in your books. I have uploaded a video to help you.
